

# IV Amazonian Workshop on Black Holes and Analogue Models of Gravity

May 11<sup>th</sup> - 15<sup>th</sup> 2015  
Federal University of Pará

## Collapse in confined geometries

*Vitor Manuel Santos Cardoso*  
Universidade de Lisboa, Portugal

Gravitational collapse is of utmost importance in several contexts, including spacetime stability, horizon formation, etc. It has been recently understood that gravitational collapse in confined geometries may lead to nonlinear instabilities. I will review the state-of-the-art of the topic, along with open questions in the field.
